Accelerated Innovation Model for Improvement
Improvement Management Platform

Project Flow

AimiHub

1

Scope a Project for Success

Plan & Define the Project by answering a few questions to understand what is known, the complexity, size (scope) of the project and determine the type of project.

Project Assessments (114)

2

Improvement Projects

Manage, develop, test, and implement changes that lead to improvement.

Aimi Projects (29)

Parent Projects (35)

Completed Aimi Projects (16)

3

Spread

Spread improvement changes.

Spread Packages (4)

Collaboratives (5)

Project Flow

1 Project/Issue Assessment

- Answer a few questions to determine:
 - Current situation, issues and complexity
 - Measures
 - Known solutions and Ideas to test
 - Collect Data to answer questions before launching a project
 - Let Aimi help you create the type of Charter from your answers

3-Spread

- Duplicate a completed Aimi Charter to use individually (goes into Projects)
- Create a Spread Package Charter Template (goes into Spread Packages)
- Create a Collaborative and attach the Spread Package Charter Template
- Create multiple Charters in the Collaborative using the Spread Package Charter Template

COMPLEX

SIMPLE

2

Choose Charters & Define Changes

Parent Charter

- Broad projects with multiple major components can be organized using a Parent Charter
- Each major component becomes an Aimi Charter
- Parent charter transfers measures to all "child" Aimi charters

Aimi Charter

- Defines a smaller scope project
- What will be designed/redesigned
 - Identify Measures (for evidence)
 - Identify Changes
 - It is the "contract" from management "owner" which authorizes the team to test changes and implement changes with improvement evidence

Complete

Aim

- Aimi Charter 1
- Aimi Charter 2
- Aimi Charter 3
- Aimi Charter 4

Features
